Crestron

Bring the best of Somfy into Crestron

There are lots of ways Somfy is compatible with Crestron home automation systems. Explore the options below for seamless integration of Somfy motorized products.

Somfy myLink™ WiFi to RTS

Somfy Connect™ UAI Plus

myLink™ WiFi to RTS

The myLink™ RTS Smartphone and Tablet Interface is a WiFi to Radio Technology Somfy (RTS) bridge that can control up to 5 channels of motorized products. With the Somfy myLink™ apps for iOS and Android, users can control individual channels of RTS products and create scenes and schedules. The Somfy myLink™ Driver for Crestron gives Crestron systems access to RTS channels and scenes programmed by the Somfy™ myLink app.

Before you begin:

- Please read the documentation included with the driver.
- Requires a fully operational RTS system with limits set and at least 1 RTS transmitter.
- myLink™ system must be fully operational and programmed with all desired RTS channels and scenes using the Somfy myLink™ app. App must also be used to assign a system ID for identification within Crestron systems.
- Compatible with Crestron 3-Series processors.
- Compatible with all myLinks running firmware 4.08 and higher.
