Integration

SAVANT

Bring the best of Somfy into Savant

There are lots of ways Somfy is compatible with Savant home automation systems. Explore the options below for seamless integration of Somfy motorized products.

Somfy myLink™ WiFi to RTS

Somfy Connect™ UAI Plus

myLink™ WiFi to RTS

The myLink™ RTS Smartphone and Tablet Interface is a WiFi to Radio Technology Somfy (RTS) bridge that can control up to 5 channels of motorized products. With the Somfy myLink™ apps for iOS and Android, users can control individual channels of RTS products and create scenes and schedules. The Somfy myLink™ Driver for Savant gives Savant systems access to RTS channels programmed by the Somfy myLink™ app.

Before you begin:

- Please read the documentation included with the driver.
- Requires a fully operational RTS system with limits set and at least 1 RTS transmitter.
- myLink™ system must be fully operational and programmed with all desired RTS channels using the Somfy myLink™ app. App must also be used to assign a system ID for identification within Savant.
- myLink™ scenes are NOT currently supported in this driver.
- Any changes to number of channels, scenes or myLinks™ in the system will require updating the system configuration in Savant's Blueprint configuration software.
- Compatible with new myLinks and legacy myLinks running firmware 4.08 and higher.
- Requires Savant Pro host running Da Vinci 8.4 or higher.

Somfy myLink™ Drivers are available in the Savant Application Manager
